Irbid.Jordan

Computer Science graduate and security-focused Back-End & Android Developer with hands-on experience building complex, multi-role systems using PHP, MySQL, Java, and Firebase. Proven ability to architect and deliver full-stack web platforms and native Android applications — from role-based access control systems to real-time marketplace solutions. Passionate about writing clean, secure code with a strong emphasis on best practices. Currently expanding expertise in Laravel and Flutter to broaden full-stack capabilities. Known for delivering high-impact results with speed, accuracy, and a lifelong commitment to learning.

Education

Bachelor's in Computer Science at Jadara University , Irbid.Jordan

February 2021 - February 2026

Grade: Very good

Languages

Arabic - Native

English - Proficient

Skills

Programming languages: C++ , C# , Java

Web: HTML , CSS , JavaScript , PHP , Laravel (Currently Learning)

Android: Java , (SQLite / Firebase) , Flutter (Currently Learning)

Database: MySQL , SQLite , Firebase

Other: Git / GitHub , OOP , CCNA

Experience

Android developer (Online freelance)

January 2023 - January 2026

- Engineered 5+ native Android apps for clients using Java and Firebase / SQLite.
- Developed user-friendly Android applications, ensuring seamless user experience and interface design.

Projects

EduWave – Virtual School Management System

• Comprehensive Development of a Full-Stack Web Platform Created an all-encompassing Full-Stack web platform designed to enhance school administration by connecting students, teachers, parents, and administrators. Implemented Role-Based Access Control (RBAC) for five distinct roles, providing secure and personalized dashboards tailored to each user type.

•Tech Stack:PHP , MySQL, JavaScript (AJAX/jQuery), Bootstrap 5.

Graduation Project Management System

• Developed a secure PHP-MySQL web application featuring a Bootstrap front-end, an AI keyword matching algorithm, and role-based dashboards. This initiative significantly reduced manual supervisor assignment time by 80% through the use of prepared-statement security

AutoParts Jo

• Created a multi-role Android marketplace using Java, Firebase Auth/Firestore/Storage, FCM notifications, and role-based access control. This platform facilitated real-time inventory management, image uploads, and seamless end-to-end order flows.

Certificates

EDRAAK : Cyber Security

July 2024

National Cyber Security Center: Cyber Warriors Competition

May 2023

The Hope: CCNA
